## About Us

At Dela Civil, we specialize in delivering comprehensive civil, infrastructure, and project management solutions. With a wealth of experience working with large scale companies, government bodies, and private clients all to an RMS standard.

We offer a wide range of services including stormwater systems, SWRAP installations, sewer works, detention basins, manholes and pits, erosion control, box culverts and ITS conduit installation.

In addition to our civil expertise, we provide reliable heavy haulage, general transport, and plant and equipment transportation services, as well as skilled labour hire, including labourers, operators and all types of skilled tradesmen. Our advanced CCTV inspection services, equipped with 360-degree cameras on remote-controlled vehicles, provide detailed

analysis and reporting for stormwater and drainage systems, helping to prevent costly repairs.

We also excel in landscaping services, offering everything from design and hardscaping to landscape maintenance, pruning, and clearance. Using parametric software for clash detection, we model unseen stormwater pipes, pits, and trench dimensions, ensuring seamless integration with engineers' plans and providing clients with the ability to visualize models in real space using Oculus technology.

Driven by a commitment to quality, innovation, and client satisfaction, we also offer full project management services, overseeing every stage from planning to execution. Our mission is to deliver dependable, efficient solutions that meet the unique needs of our clients, contributing to the development and sustainability of the communities we serve.

# Mission Statement

"Our mission is to deliver high-quality civil and infrastructure solutions that enhance communities and environments. With expertise in construction, haulage, labour hire, CCTV inspections, and landscaping to name a few, we are committed to providing reliable, safe, and efficient services tailored to the unique needs of our clients. By combining innovative technology, skilled personnel, and a dedication to sustainability, we strive to complete every project to the highest standards, contributing to the growth and resilience of the industries and communities we serve"

# + Our Services

## Stormwater

Dela Civil has a proven track record of delivering high-quality civil works for large corporations and government bodies. We specialize in a range of infrastructure projects, including stormwater management systems, SWRAP (Stormwater Quality Improvement Devices), sewer installations, detention basins, manholes, pits, erosion control measures, and box culverts.

With extensive experience and a commitment to industry standards, we ensure that every project is completed efficiently and to the highest quality, contributing to sustainable and resilient infrastructure solutions.

Our Form, Reo, and Pour (FRP) services provide a comprehensive, end-to-end solution for concrete construction, with a strong emphasis on safety, precision, and durability. The process begins with meticulous formwork preparation, ensuring the molds are properly aligned and reinforced to maintain structural integrity during the pour. We then focus on the placement of reinforcing steel (reo), which is carefully measured and positioned to provide the necessary strength and support for the concrete structure. Finally, our skilled team conducts the concrete pour with precision, ensuring an even and thorough application that meets all engineering and safety standards.

At every stage, from formwork to reo and through to the final pour, we adhere to strict safety protocols and best practices to minimize risks on-site and ensure the integrity of the structure. Our team is trained to assess potential hazards and make informed decisions to keep the project on track and secure. Whether it's for foundations, retaining walls, slabs, or other critical infrastructure elements, our FRP services are executed with a focus on both the immediate quality and the long-term performance of the structure.

# Haulage

Our haulage division is built on a foundation of reliability, safety, and efficiency, providing tailored solutions for heavy haulage, general transport, and plant and equipment transportation. With a modern fleet designed to handle oversized, heavy, and complex loads, we serve industries that demand precision and care in logistics.

Whether it's transporting construction machinery, industrial equipment, or large quantities of materials, we have the expertise to plan and execute each move seamlessly. We pride ourselves on adhering to strict safety standards, minimizing downtime, and ensuring on-time delivery.

Our team works closely with clients to understand their specific requirements, offering flexible transport solutions that meet tight schedules and comply with regulatory standards. By consistently delivering dependable transport services, we aim to build long-term partnerships with our clients and contribute to the success of their project.

# Labour Hire

Our labour hire services offer flexible, skilled, and reliable personnel across a range of roles, including general labourers, drivers, machine operators and tradesmen.

We understand the importance of having the right team in place to keep projects moving efficiently, and we are committed to supplying qualified workers who meet the specific needs of each job. Whether it's short-term labour for peak project periods or long-term workforce solutions, our experienced workers bring expertise in a variety of sectors, while our drivers and operators are fully trained to handle machinery and transport tasks with precision and safety.

With a focus on safety, professionalism, and adaptability, our labour hire services are designed to support the success of projects, no matter the scale.

At Dela Civil, we work closely with our clients to ensure that all personnel integrate smoothly into their teams, providing not just manpower, but a strong work ethic and attention to detail that help drive projects to completion on time and within budget.

# CCTV

Our CCTV inspection services are designed to provide comprehensive, detailed assessments of stormwater systems and pits. Utilizing state-of-the-art 360-degree camera equipment mounted on a remote-controlled vehicle, we offer precise and thorough inspections that deliver clear, accurate pipeline meterage and identify cracks, blockages, and defects. This cutting-edge technology allows us to navigate hard-to-reach areas and capture high-quality footage, ensuring that every aspect of the stormwater or drainage system is thoroughly examined. Our detailed reports include documented footage, defect analysis, and actionable insights, enabling clients to address issues before they escalate.

Whether it's routine maintenance or diagnosing specific problems, our CCTV services provide the critical information needed to ensure the longevity and functionality of essential infrastructure. By offering a reliable, efficient, and non-invasive inspection method, we help our clients maintain the integrity of their assets while minimizing disruption and costs.

# Landscaping

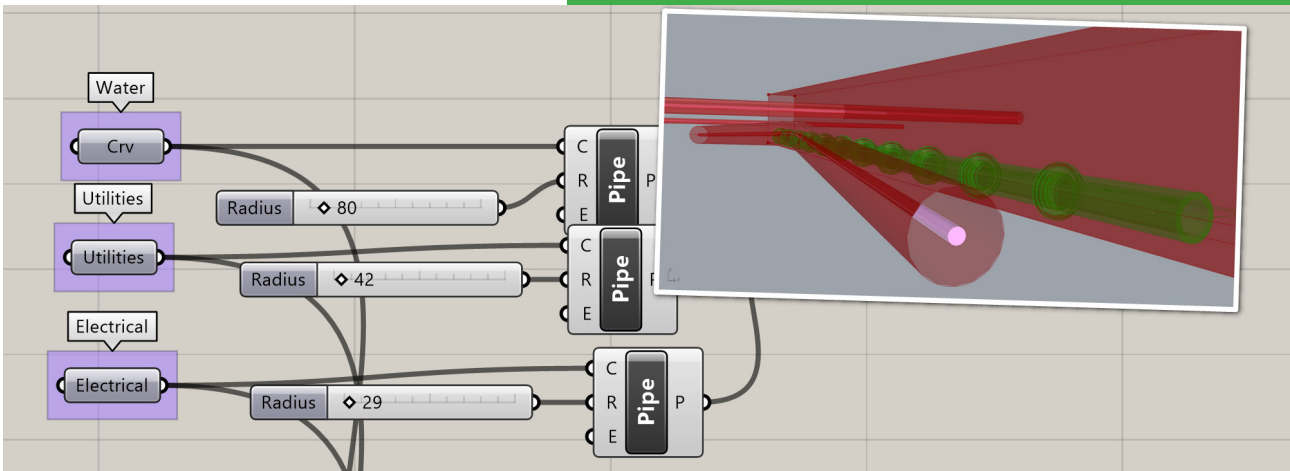

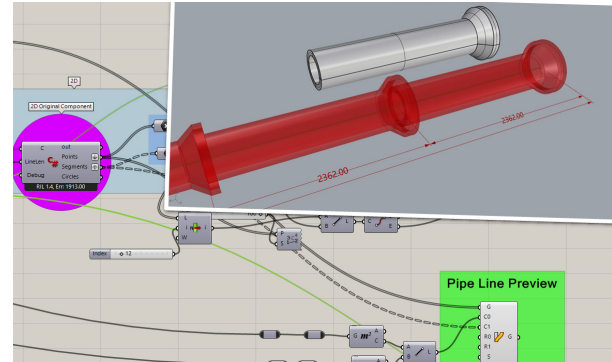

Our landscaping division provides a full range of services to enhance and maintain outdoor spaces, from comprehensive landscape maintenance to hardscaping and design. We specialize in creating aesthetically pleasing and functional environments through expert landscape design and the installation of durable pavements and hardscape features that add both beauty and practicality.

Our team also offers professional pruning and vegetation clearance to keep landscapes well-maintained, promoting healthy plant growth and ensuring safety and visual appeal. Whether it's ongoing maintenance, a new design project, or specific tasks like clearance and hardscaping, we bring attention to detail and a commitment to quality in every job. We work closely with clients to understand their vision and deliver customized solutions that meet their needs, making sure every outdoor space is both functional and visually striking. From residential properties to large commercial sites, we take pride in delivering landscapes that not only look great but stand the test of time.

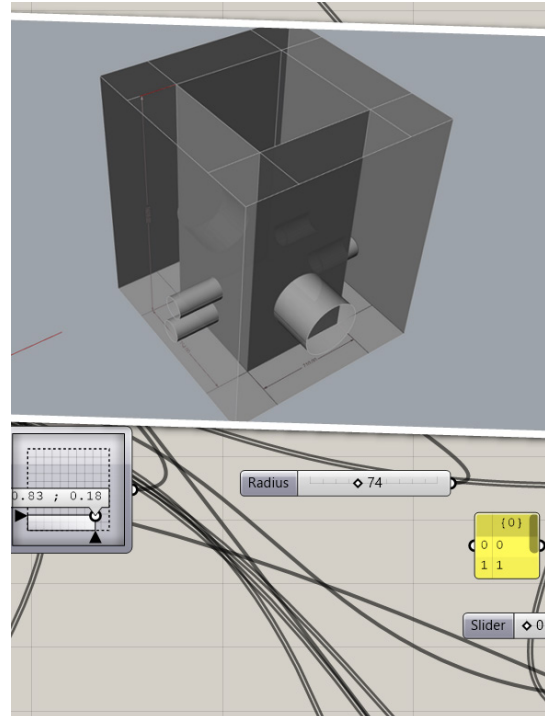

# Clash Detection

Dela Civils clash detection services utilize advanced parametric software to accurately model hidden infrastructure, including stormwater pipes, pits, and trench dimensions. By integrating these models with the engineers' model, we can anticipate and identify potential clashes before they arise in the construction phase.

This proactive approach minimizes costly rework, ensures design integrity, and enhances project efficiency. Additionally, we offer the ability to visualize these models in real space using Oculus technology, allowing clients and teams to experience the project in augmented reality. This immersive visualization provides a clearer understanding of potential issues and supports better decision-making throughout the design and construction process.

Our combination of precision modeling and cutting-edge visualization tools helps ensure successful project delivery, avoiding delays and optimizing collaboration.

# Management

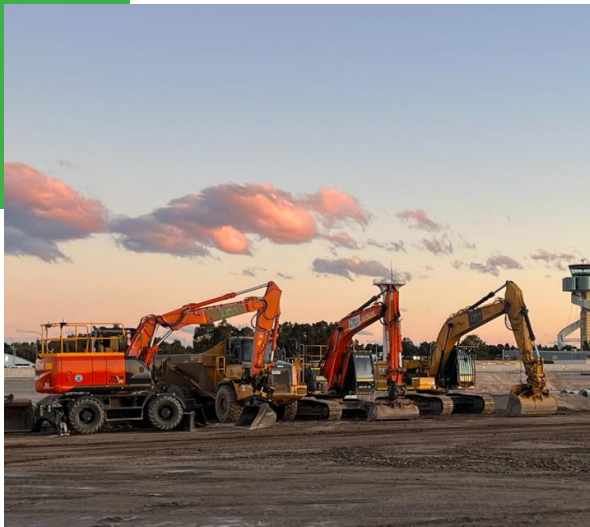

Our project management services are designed to oversee and enhance the execution of our clients' projects, ensuring they are completed on time, within budget, and to the highest quality standards. We bring a wealth of experience in managing diverse civil engineering projects, from initial planning and design through to execution and final handover. Our team employs industry best practices and innovative strategies to coordinate resources, manage risks, and facilitate effective communication among all stakeholders.

By aligning our management approach with our clients' objectives, we ensure that every aspect of the project is meticulously planned and executed. Our commitment to transparency and accountability allows clients to stay informed and engaged throughout the project lifecycle, fostering trust and collaboration. Ultimately, our goal is to drive project success and deliver exceptional results that meet and exceed our clients' expectations.

# Plant Hire

We take pride in offering a well-maintained fleet of plant hire equipment, ensuring top performance and reliability for every project. Our range includes excavators, wheeled excavators, truck and dogs, bogie tippers, semi truck and trailers, moxy dumptrucks, watercarts, VacTrucks, road sweepers, and crane trucks. Each machine is rigorously serviced and

inspected to meet the highest standards of safety and efficiency. Whether for short-term or long-term hire, our equipment is available with flexible options and can be supplied with experienced operators to ensure seamless integration into your project. We prioritize reliability and quality, ensuring that our machinery is ready to perform whenever and wherever it's needed

# Featured Projects

**Prospect Highway Upgrade**  
- 4km of Stormwater RCP and  
FRC Pipe and Pit

**Westconnex M4 Widening**  
- Stormwater installation,  
FRP and conduit installation

**SESAD Mascot Airport**  
- 4km of Stormwater RCP and FRC  
Pipe and Pit

**Garden Island**  
- Tidal Trunk Drainage and ITS  
installation

**Wagawaga - Riverina intermodal freight  
and logistics hub**  
- 5km of Stormwater RCP and FRC Pipe and  
Pit for Wagawaga council

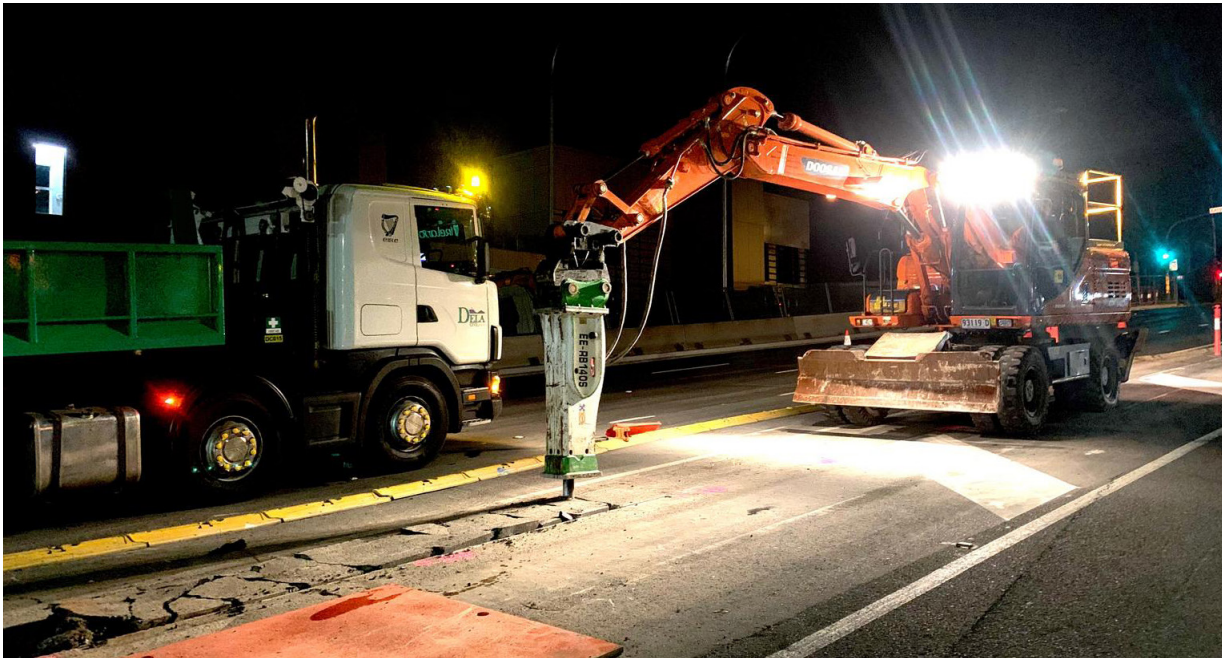

**Nowra Bridge Project**  
- Stormwater installation

**Cox Road Upgrade**  
- Stormwater installation and  
FRP works

**Northconnex**  
- Stormwater installation, ITS  
installation, FRP and conduit  
installation

**Heathcode Road and Linden st.**  
- Stormwater installation, FRP and  
conduit installation

## **Basyside Council Beach Replenishment**

- Excavation, haulage and  
instilation of Beach Front
